## Ecology & Society

*The Dynamics of Purposeful Change: A Model*

RS | SYSTEMIC  
DX | DESIGN  
ASSOCIATION

*Distinctions and Analogies: Mapping Social System Identity*

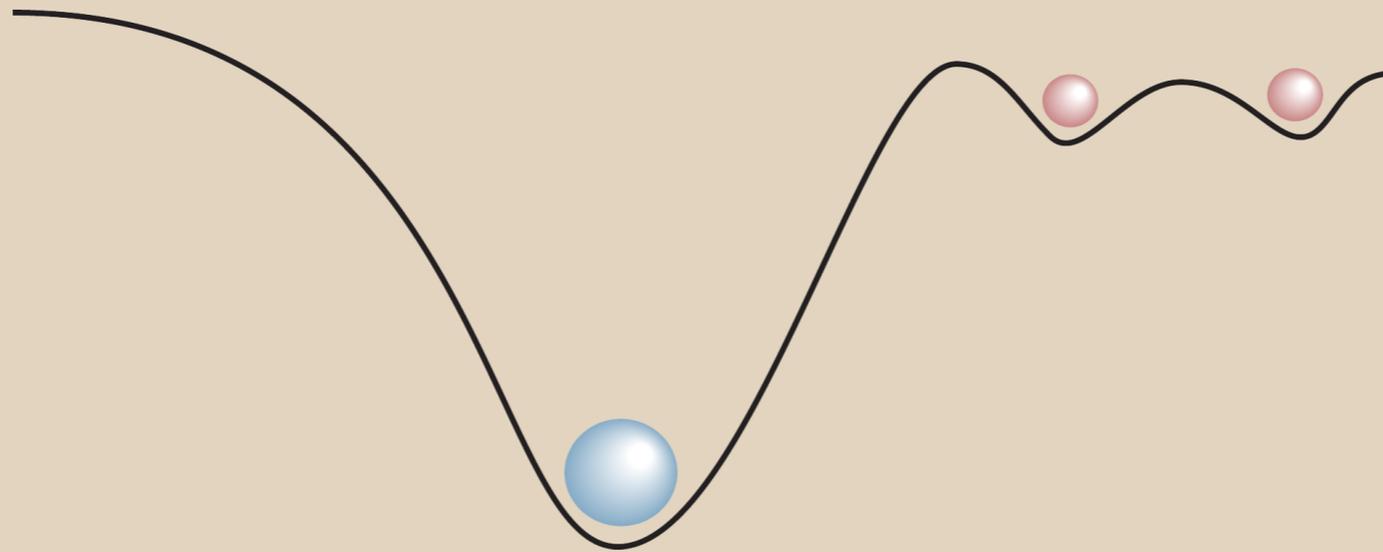

## Enacting Cybernetics

*Recursively Contextual Identity: A Variant Formulation of First- and Second-Order*

**regime:** a pattern of identity and viability

**logics:** factors that recursively stabilize a regime by attracting the participation of individuals and organizations

**social attractor:** a constellation of logics

<b>logics</b>	<b>commodity</b>	<b>organic</b>	<b>local</b>
<b>narrative</b>	"feed the world"	"sustainable"	"resilient"
<b>distribution network</b>	global	global	regional
<b>values</b>	price, fungibility, efficiency, convenience	environmental stewardship	place, conviviality, trust
<b>driver of environmental performance</b>	market innovation	third-party certification	social feedbacks

## commodity systems

- **price**
- **fungibility**
- **convenience**
- **efficiency**

## commodity food systems — “race to the bottom”

- **debt:** among producers (farmers, ranchers, fishers)
- **concentrations:** land ownership, supply chain goods/services
- **soil:** erosion, degradation
- **water:** depletion, pollution, eutrophication
- **diversity:** monocultures

# Ken Meter

<https://www.crcworks.org/>

1. The 8,436 farms in Southeast Minnesota sold **\$866 million** of farm products in 1997.

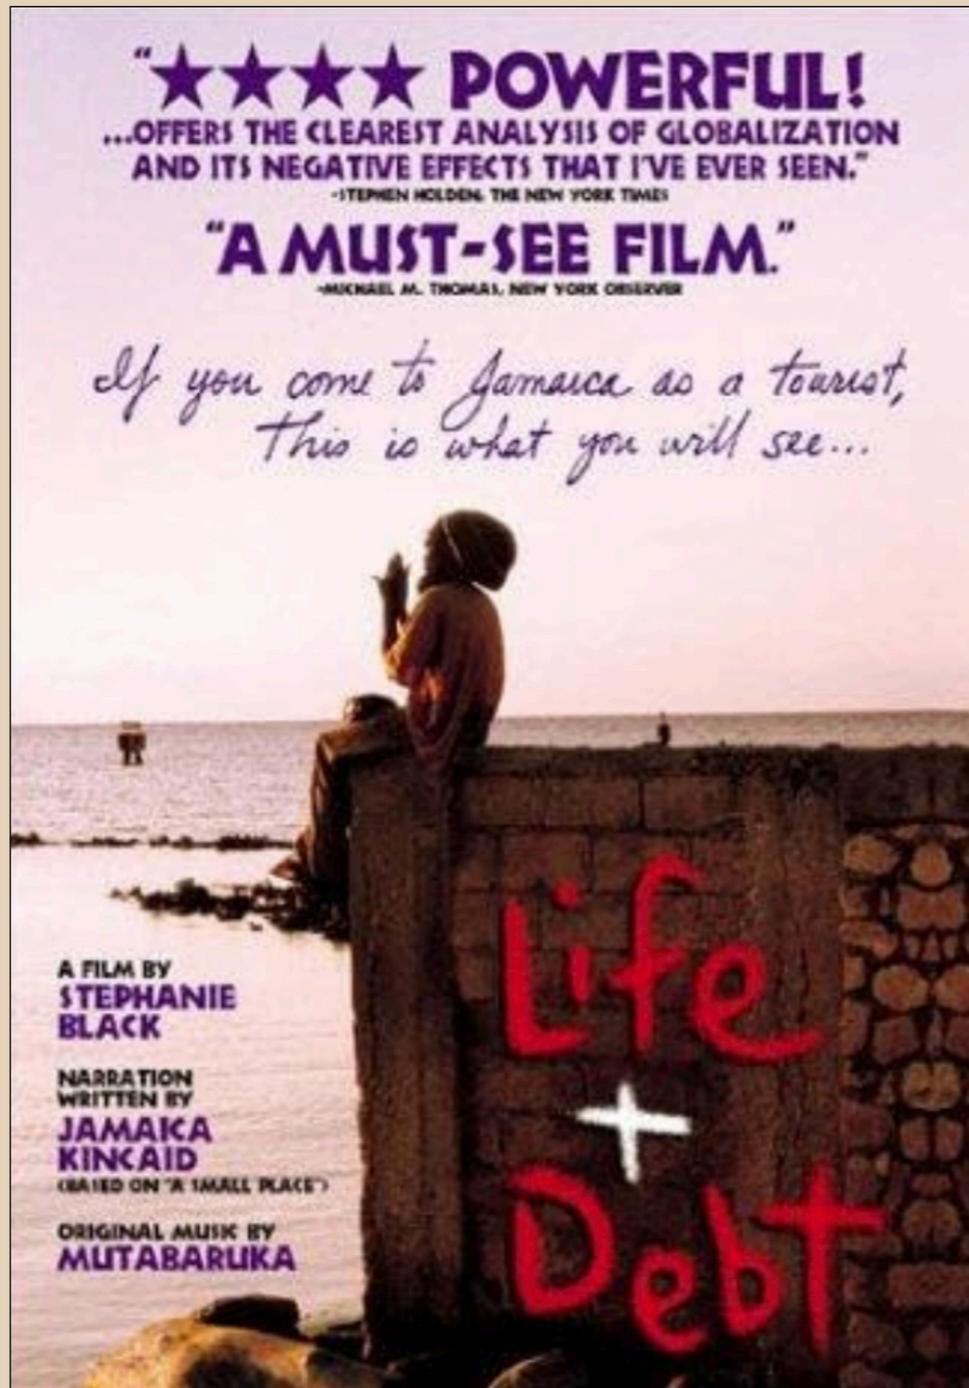

2. However, the region's farmers spent **\$947 million** raising this food. This is **\$80 million** more than they earned by selling their products!

## Finding Food In Farm Country

### Southeast Minnesota FACT SHEET

3. Even more troubling, Southeast Minnesota farm families spend about **\$400 million per year** purchasing inputs and credit from distant suppliers. Very little of this money builds wealth for local families.

4. Meanwhile, the 303,256 residents of Southeast Minnesota spend **\$506 million** buying food, almost all from producers outside of the state.

**2001**

[https://en.wikipedia.org/wiki/Life\\_and\\_Debt](https://en.wikipedia.org/wiki/Life_and_Debt)

“End of day result will mean that we have no national food security.”

“When milk powder finds its real cost, where there are no subsidies in the first world -- in Europe or North America -- it will be more expensive than the milk we currently produce.

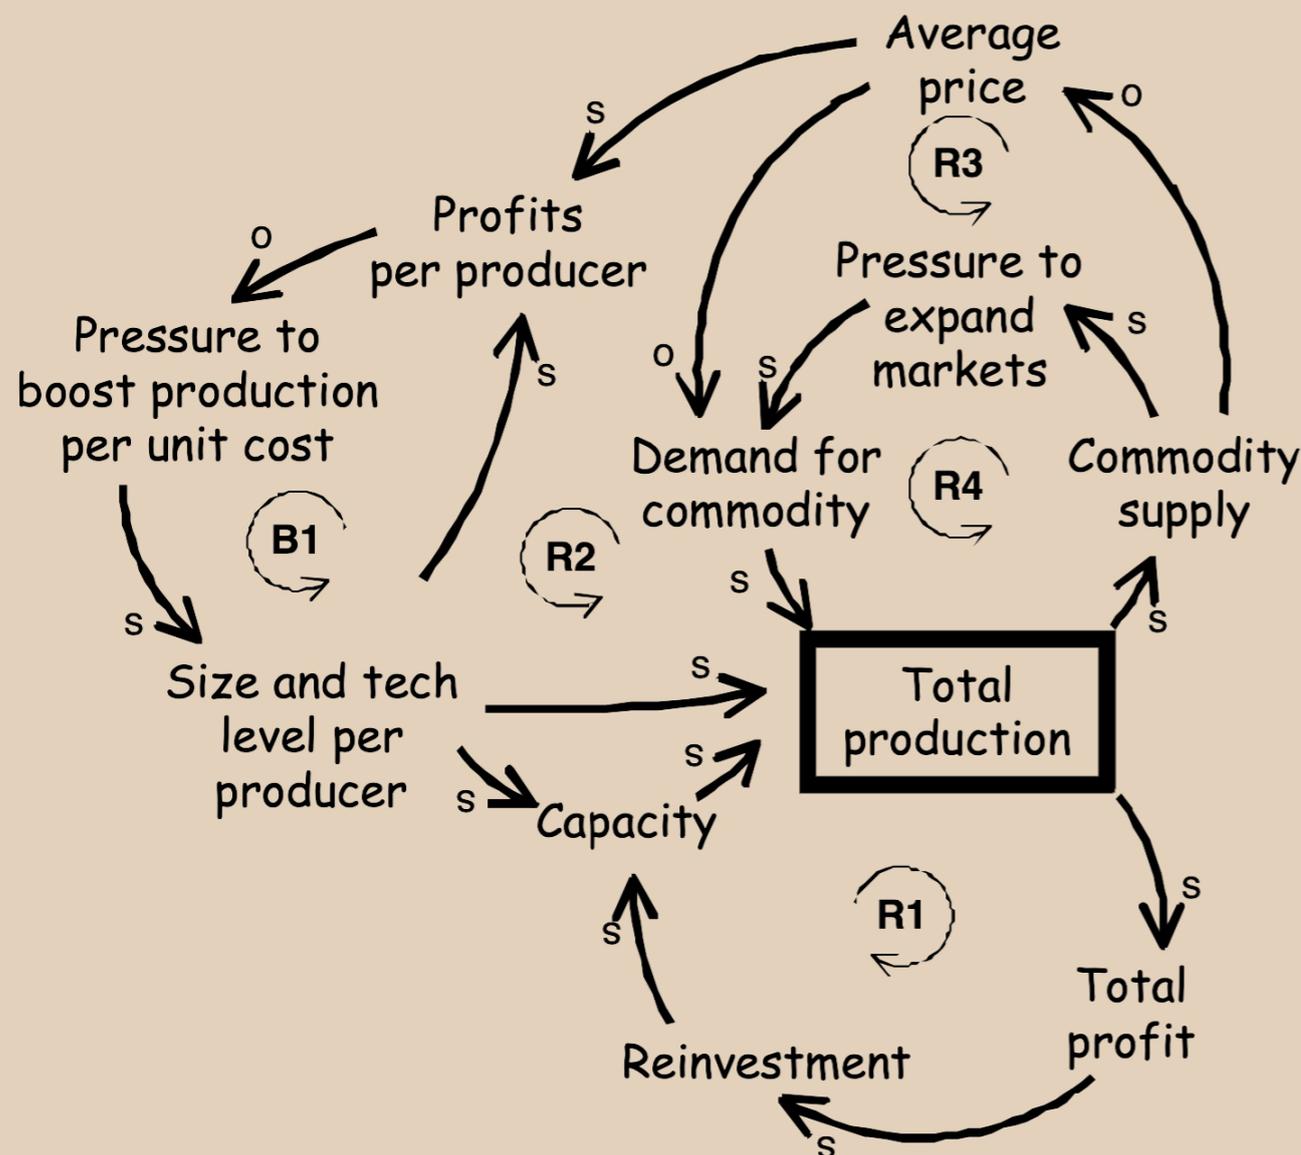

“What do we do in the meanwhile? We go out of business.”

-- Dairy Farmer (~35:00)

# Commodity Systems Challenges

A Sustainability Institute Report, April 2003

## Combined Production Growth Drivers

**strategies for avoiding commodity traps through producer premiums**

**civil society:** certifications (e.g., fair trade, organic)

**state:** subsidies (e.g., USDA Conservation Reserve)

**producers:** collective agreements (e.g., Int'l Coffee Agreement)

**>> How about local?**

## Adding Value

**KARL KUPERS is co-founder of Shepherd's Grain, a cooperative of wheat farmers with lands in Washington, Oregon and Idaho.**

“ We are a small group of progressive family farmers—thirteen farmers, all owners of the company. Each farmer is using a direct-seed system and is certified by Food Alliance, a certification program for environmentally and socially responsible agricultural practices.

We spent three years testing the different wheat varieties to see which would produce the highest quality bread flour. The red wheat used for flour has not generally been raised in the Northwest—the majority of the wheat is a soft white wheat, which is exported to Asia for noodles. →

Photo: Erikas Sober Laxson

The Shepherd's Grain family of farms brings nearly 70,000 acres under a direct-seed system of agriculture. Pictured: Karl Kupers, with partners Mike, Jerry and Matt Stubbs.

### Karl Kupers (2005)

“Wheat is generally priced through the commodity exchanges in Chicago, Kansas City and Minneapolis. But I said, ‘We're not going to use the commodity prices.’ I looked at the miller and said, ‘How do you price your product?’ And he said, ‘Well, I figure my cost of production and add a reasonable rate of return.’ I looked over at the baker, and he said the same thing. So I said, that’s just what we're going to do.”

"Ideas, Artifacts, and Facilities: Information as a Common-Pool Resource."

## ¿ PROVOCATION ?

Draw a 2x2 matrix.

Label one axis: abundant and scarce (nonrivalrous and rivalrous).

Use the lingo of currency design to label the other axis.

What are the four quadrants?
